17. Energy Management	Risk	The effective use of energy sources is mandatory to manage cost to company and reduce environmental burden. With evolving focus on climate, the use of conventional fuels including fossil fuels is going to diminish.	Alembic has generously invested in renewable energy that includes: 1. Increasing its solar energy capacity by installing roof solar panels and the Company is in process of setting up a solar plant of 12 MW. 2. Installation of windmills to increase the share of renewable energy. The Company is working extensively in development of flow chemistry as well for its production process, which is likely to result in improvement of yield, energy consumption reduction.	Negative impact due to increased cost of fuel and capex in energy efficiency appliances. However, positive financial impact is expected in long-run due to lower cost of energy.
18. Water Management	Risk	Excessive consumption and toxic discharge are implications of faulty water management which poses risks of regulatory restrictions, stakeholder activism, and operational shutdown. Continual supply is necessary to support multiple activities like heating, cooling, washing, distillation and other manufacturing activities throughout the production process.	Alembic is working in multiple avenues for responsible water management. • The Company has converted all its API site to Zero Liquid Discharge (ZLD) and all its formulation units uses their treated effluents in gardening and as process inputs. • In its efforts to restore ground water, the Company has made numerous charging wells and is adding more every year. • The Company effectively uses its waste water by using domestic treated water in gardening and industrial treated water in boilers and chillers. The Company has constructed artificial ponds at some sites for effective rainwater harvesting.	Negative implication due to cost incurred in handling and safe disposal.
