Green building concept is being followed for all new buildings. For all future buildings, GRIHA rating (Green Rating for Integrated Habitat Assessment) will be targeted. These initiatives help in reducing the release of Green House Gases (GHG) into the atmosphere.

BEL had installed 1774KWp roof top solar power plant and additional 395 KWp roof top solar plant has been planned to install in FY 2022-23 in Ghaziabad Unit.

9. Briefly describe the waste management practices adopted in your establishments. Describe the strategy adopted by your company to reduce usage of hazardous and toxic chemicals in your products and processes and the practices adopted to manage such wastes.

Hazardous Waste Management: When handling with hazardous waste, the principle of reduction, reuse, recovery and recycling is practiced. The production of hazardous waste has been reduced at the process level by introducing appropriate chemicals and procedures that produce less hazardous sludge in the wastewater detoxification process, in addition to the use of cleaner technologies. The use of sodium hypochlorite, and sodium metabisulfite in place of lime, bleach powder and iron sulphate help reduce the amount of hazardous sludge. In addition, the introduction of cyanide-free galvanizing and copper plating processes have helped reduce the production of hazardous waste. In the previous year, BEL achieved continual improvement by the elimination of IPA use in HF Oxide etching process in the solar plant. These initiatives resulted in generation of less hazardous waste. Bharat Electronics has set up a system for the safe handling of hazardous waste by creating an exclusive, well-protected place for the safe storage of hazardous waste. BEL has tied up with the State Pollution Control Board's Treatment, Storage & Disposal Facility operators to dispose of solid hazardous waste that can be land filled. Recyclable waste is handed over to authorised facilities of the Pollution Control Board for scientific processing and recycling. This system effectively prevents pollution from hazardous waste.

E-Waste Management: Electronic waste that is generated during the manufacturing of products is segregated, stored and handed over to authorised agencies of the Pollution Control Board for scientific processing, recovery and recycling. End of Life electronic waste such as computers and other electronic items are also handed over to authorised agencies of the Pollution Control Board for scientific processing, recovery and recycling. End of Life e-waste products such as electronic voting machines are received back under Extended Producer responsibility initiative and are disposed scientifically. Users of electronic products receive handling and disposal guidelines for the safe disposal of electronic waste after expiry. Efforts are being made to reduce the hazardous component in electronic products by introducing as many RoHS-compliant components as possible.

Solid Waste Management: BEL has put in place a source segregation system for proper handling of waste. Biodegradable waste such as food waste and green waste of colony is composted through the 1.0 tonne organic waste converter with an average of 0.45 to 0.6 Tons per day, wherein manure is generated. The manure so generated is used for horticulture application in the BEL Estate area. The green waste generated in BEL is subjected to natural composting. Leaf shredding machine is available for reduction of the size of green waste. In addition, the food waste generated in the factory canteen is transported to Bio-Methanation plant on daily basis. The anaerobic biogas plant is based on UASB technology with a capacity of 2.0 tonnes and leads to a saving of about 50 SCM PNG per day in cooking. Land fillable waste is sent to a well-established solid waste treatment facility for processing.
